

NH METHOD

Method for Inventorying and Evaluating Freshwater Wetlands in New Hampshire

PUBLIC RELEASE The NEW! [NH Wetlands Mapper](#)

The [NH Wetlands Mapper](#) is now available to the public! This is a free on-line web tool, developed as a companion to the NH Method. The maps, data and on-line tools in the NH Wetlands Mapper can be used to obtain information needed to answer most of the non field-based questions and associated calculations asked in the NH Method. The NH Wetlands Mapper also allows you to save your maps and data on the site and to enter data into an online spreadsheet version of the NH Method evaluation data sheets.

Visit the NH Wetlands Mapper and [Click the Welcome and the Help Tabs](#) to read the explanation of all the Mapper's functions and how to use them.

nhwetlandsmapper.unh.edu

Development of the NH Wetlands Mapper was made possible by a grant from the US Environmental Protection Agency, Region 1 Office of Wetlands.

UPDATED! NH Method 2012

Following its first year of use, the NH Method has been updated with some minor revisions based on feedback from users.

The update includes the new [NH Wetlands Mapper](#)

[Click here](#) to see the list of what has changed.

Updated sections and the full document are now available on the
